

Reply Copilot

Your free bonus. Paste any customer message and get three replies written to convert, plus the follow-up to send if they go quiet. It also builds better prompts for ChatGPT, Claude and Gemini.

OPEN THE TOOL

Free · No sign-up · Use it as often as you like

THE TWO MODES

Client Reply

For when a customer messages you and the reply matters.

1. Paste exactly what they wrote.
2. Say what you sell, then pick the channel, your goal, and the tone.
3. Get three different replies, why each works, and the follow-up.

Prompt Builder

For when AI keeps giving you disappointing answers.

1. Describe what you want the AI to do, in plain words.
2. Pick the type of task and which AI you will use.
3. Copy the finished prompt straight into ChatGPT or Claude.

FOUR THINGS THAT MAKE IT MUCH BETTER

1 Be specific about what you sell

"Web design" gives you a generic reply. "Web design for dental clinics, 3-week delivery, from AED 6,000" gives you one you can almost send as-is.

2 Paste their message word for word

Do not summarise it. The tool reads their actual wording to work out what they are really asking and how they are feeling.

3 Pick the goal honestly

"Book a call" and "close the sale" produce genuinely different replies. Choosing the wrong one gives you a good reply to the wrong question.

4 Read all three before you choose

They are three different strategies, not three rewordings. The second or third is often the one that fits your situation better.

One important thing

You will see square brackets like [your price] or [Name] in the replies. Those are deliberate. The tool will never invent your prices, dates or promises, so it leaves those for you to fill in. Always read a reply before you send it.

Want your own version? We build custom copilots trained on your own offer, pricing and the objections you actually get — plus AI agents, automations and internal tools that remove manual work from your business.
